

## PRE and POST Treatment Instructions for Ultrasonic Facial

Ultrasonic facials are very gentle and safe for even sensitive skin. They work well for people with rosacea, acne, dull, or aging skin. They're safe for all skin types because they don't cause redness, swelling, or irritation. Non-invasive and no down-time.

### Contraindications for Ultrasonic Facial

- *Pregnancy or nursing*
- *Pacemakers*
- *Circulation disorders*
- *Acute/severe infection*
- *Cancer patients*
- *Diabetes*
- *Blood disorders*
- *Heart conditions*
- *Seizures*
- *Active Acne/Open Lesions*

### *Post Treatment:*

- *Your skin may be a little pink right after an ultrasonic facial, but most people feel comfortable returning to their regular activities right away. That said, some people do get mild flaking when the ultrasonic facial is used with other exfoliating treatments or when it's used with active ingredients that increase flaking.*
- *Wear SPF 30 + immediately after treatment and for the next 7 days*
